I build custom software, AI systems, business databases and digital platforms for companies that need to organize, automate and scale their operations. Through Tolentino SW, I create tailored digital solutions for public and private organizations, including companies, institutions, local governments and teams that need technology adapted to their real operational needs.

Core Specialties

- Custom software development for businesses
- Robust database design and implementation
- CRM systems for clients, suppliers, distributors and internal teams
- AI assistants and agents for customer service, operations and executive reporting
- Dashboards with metrics, segmentation and real-time reports
- Business process automation and Excel-to-database transformation
- UX/UI design for intuitive business platforms
- Training and implementation support for company teams

Business Value

- Transform manual processes and fragmented data into centralized systems
- Help executives view updated operational data through reports and charts
- Create software for sales, inventory, logistics, suppliers and customer service
- Build AI systems connected to databases, dashboards and knowledge bases
- Support public and private sector communication, management and automation

Selected Projects

- Rionegro AI WhatsApp Assistant - AI-powered institutional communication, citizen support, announcements, reports and administrative management.
- VoiceCart AI - Voice and WhatsApp commerce assistant for product guidance, questions, order flow and e-commerce support.
- Tolentino SW Business Systems - Custom databases, CRM, dashboards, automation, AI agents and operational organization for companies.

Technology Stack

- Frontend: React, Next.js, TypeScript, HTML, CSS, Tailwind CSS
- Backend: Node.js, Express, REST APIs, business logic and automation workflows
- Databases: PostgreSQL, Prisma, SQL, Excel/CSV migration and data modeling
- AI: OpenAI, AI agents, knowledge bases, assistants and intelligent workflows
- Cloud and integrations: Vercel, Render, Supabase, WhatsApp API, UltraMsg, ElevenLabs, Google APIs
